

HAVE YOU HAD, OR DO YOU HAVE:

- Diabetes Heart disease/attack High Blood Pressure Stroke Chronic fatigue syndrome
- Arthritis Bone disease Nervous system disease Muscle disease Fibromyalgia
- Connective Tissue Disorder (i.e. Lupus) Grind your teeth Night guard Chrons/Colitis/Irritable bowel disease
- Immune system suppressed/HIV Sleep disorder/apnea Depression Smoke
- Cancer -list type/year/surgery _____

PAST HISTORY:

Adult/Childhood Illnesses:

Past Surgical/Hospital:

Previous Injuries: Motor vehicle? Yes No (explain) _____

Workers Compensation? Yes No (explain) _____

Other: _____ Previous Treatment and Diagnostic Tests: _____

Other Doctors seen for this condition: MD DC DO DDS

Previous Spinal X-rays: Done For What Reason _____ Date: Results, If Known:

Current Medications: (prescription, over-the-counter, or self-medication)(please list)

List any vitamins, supplements, or herbal remedies you are currently taking: _____

FOR WOMEN ONLY: Have you taken oral contraceptives? Yes - When did you begin? _____ No

TERMS OF ACCEPTANCE

The purpose of chiropractic is to restore and maintain the mechanical integrity the spinal column. Vital nerve pathways are housed within and protected by the bones of the spine. These bones are called vertebrae. Misalignments, vertebral subluxations, of the spinal bones may interfere with the function of the nerves housed within the spinal column. Subluxations have many causes and may prevent the various organs of the body from working properly.

The chiropractic adjustment is administered for the purpose of correcting the vertebral subluxation(s), so that every part of the body receives unimpaired neural messages. Reduction of the vertebral subluxation(s) will result in improved communication of the neural messages, allowing the body to perform all its functions more efficiently, including the healing process.

In some cases where disease and symptoms have been present, the removal of this form of interference renders the body sufficiently able to bring about a restoration of health very quickly. In others, the process is slower and in some cases it is only partial or not at all. Regardless of what the disease is called, the chiropractor does not offer to heal or treat it. The goal of the chiropractor is to correct subluxations, this very damaging form of interference to the body's natural functioning. The chiropractor promises no cure from and offers no treatment of disease.

The chiropractor has the responsibility to report to the patient any unusual findings discovered in the course of the chiropractic examination. All such findings will be recorded in the patient's record as reported to the patient. The patient may then seek evaluation and advice from other health care professionals.

I, _____ represent that the above information is accurate. I have read the "Terms of Acceptance", understand it fully, and accept chiropractic care on this basis.
